

Series composed of majolica side tables and by side tables with glass top and base consisting of independent elements made of majolica.

SIDE TABLES

Single cylindrical elements made of majolica.

SIDE TABLES WITH GLASS TOP

Base: faience cylindrical elements with different dimensions and positioned according to a pre-established scheme.

Top: transparent extra-light tempered glass available both square and round.

The side tables code B175F and B175G and the elements composing the base of the side tables B175A and B175B are made and decorated by hand with exclusive colours by Nicolò Morales.

Notes:

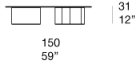

The material, the particular handwork and the production techniques used for the bases lead to colour and design differences among its components. Irregularity is the featuring characteristics of this production process: it is impossible to guarantee identical set of elements in different tables even within the same order.

The majolica cylindrical elements are suited for an outdoor use, but do not withstand temperatures below 0°C. It is therefore necessary to store them in a closed environment in case of particularly harsh weather conditions, during the night if frost is expected or in areas subject to high day/night temperature variations and always for seasonal protection.

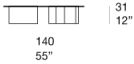

This product can be used also in interior environments.

We advise to use a Winter Set protection cover.
