

Seating with central backrest composed of mobile cylindrical elements.

The **seat padding** is made of recyclable expanded polyethylene mixed with Aerelle® blue polyester fiber and by a layer of recyclable polyester, all encased in a cotton fixed foam covering.

The **upholstery of the seat** is removable and consists of a layer of synthetic felt – made from polyester fibers derived from the recycling of PET bottles from waste sorting, that will be 100% recyclable again – to which a décor is applied, each time different, made by using production cuttings of the different fabrics and materials in the collection that would otherwise remain unused.

The elements acting as backrest are fixed in the center of the seat but can freely move.

The **backrest elements padding** is encased in a fixed covering in three-dimensional black polyester fabric and is made of recyclable expanded polyethylene mixed with Aerelle® blue polyester fiber with an insert in expanded polyurethane.

The **backrest elements upholstery** is fixed and made of Maglia Rasata, an elastic tubular knit produced with polyester yarns remaining from the weaving of the indoor fabrics in the collection.
