Resort

design : Metrica by Bruno Fattorini, Robin Rizzini

Resort is a flexible, modular architectural structure that can be used both as a wide parasol and for the creation of articulated covered passageways.
This set of shelves creates true outdoor bookshelves to complete the structure.

Uprights: shaped profiles made of aluminium, matt varnished in the colours in the collection or gloss varnished in a selected range of colours (reference colours: Mano Lucida wood sample collection).
Supports: varnished aluminium matching the colour and the finishing of the uprights.
Shelves: heat-treated ash heartwood Aurea Optima.

Notes:
The shelves in Aurea Optima heat-treated ash heartwood are treated with an oil and water repellent water-based finish that limits the absorption of liquids and greasy substances.

This product can be used also independently and in interior environments.
